REALTOR®

JOHNNY WONDER

Q. WHY DO JELLYFISH STING?

CATHY BUTLER OF VIRGINIA BEACH, VA, WINS A PRIZE FOR THIS QUESTION.

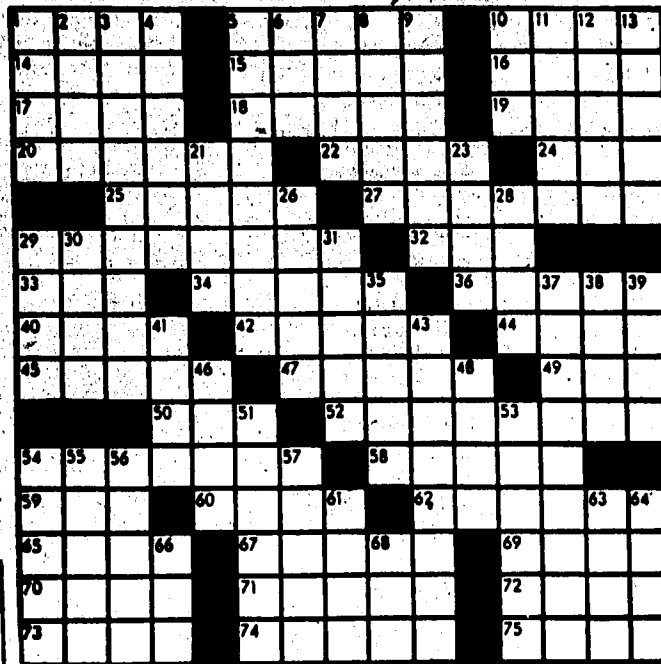

A. It's hard to believe that the harmless looking jellyfish can give such a painful sting. A jellyfish is a simple kind of sea animal that looks like an umbrella-shaped blob of jelly. Hanging down from the jellyfish's body are string-like tentacles. The tentacles are armed with stinging cells that contain a paralyzing poison, which

the jellyfish uses to capture its food. If a fish brushes against the jellyfish, the stinging cells on the tentacles "explode," shooting poison into the victim. Then the tentacles pull the victim up to the jellyfish's mouth at the bottom of the "umbrella."

You can win a World Atlas for \$100,000 by answering this question. Send your name and age to JOHNNY WONDER, c/o The Times Herald, P.O. Box 1280, (DA) Santa Cruz, CA 95061.
